# Why PostSig won Best AI for Infrastructure & Operations

What PostSig LineageAI™ does, why it stood out, and what the award recognizes.

**7** AWARDS & RECOGNITION

AWARD WINNER

**Best Artificial Intelligence (AI) for Infrastructure & Operations**

2026 WatersTechnology Buy-Side Technology Awards · Winner: PostSig

WHY WE WON

# AI that knows what governs now, what changed and why.

## Overview

PostSig LineageAI™ is a cross-document and operational intelligence platform for buy-side firms. It connects agreements, pricing, invoices, products, entitlements, vendors and other records over time to determine what is current, what changed and what requires action across spend, inventory, rights, renewals and governance.

## The solution

PostSig LineageAI™ maintains the relationships among documents and operational records, then ties each answer to source evidence. Buy-side teams use it to validate invoices, trace pricing changes, manage inventory and entitlements, prepare renewals, clarify data-use rights and preserve investor rights and governance terms.

THE SECRET SAUCE

### The Context Graph

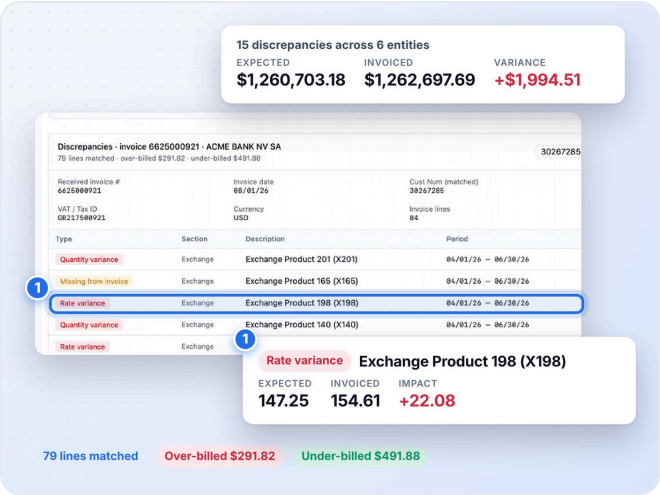
PostSig LineageAI™ is our Context Graph. It connects documents, data, transactions, products, people and changes over time, determining what relates, what changed and what is true now. That lets AI explain not just a record, but the operational consequence across spend, inventory, rights and governance.

> **“This win recognizes a different model for enterprise AI: intelligence that understands how business records relate over time and shows the evidence behind every answer. For buy-side firms, that means faster decisions grounded in the operational context that makes those decisions defensible.”**
>
> **Hendrik Bartel** · CEO and Co-Founder, PostSig

SEE IT IN THE PRODUCT

# Every number, tied to the records behind it.

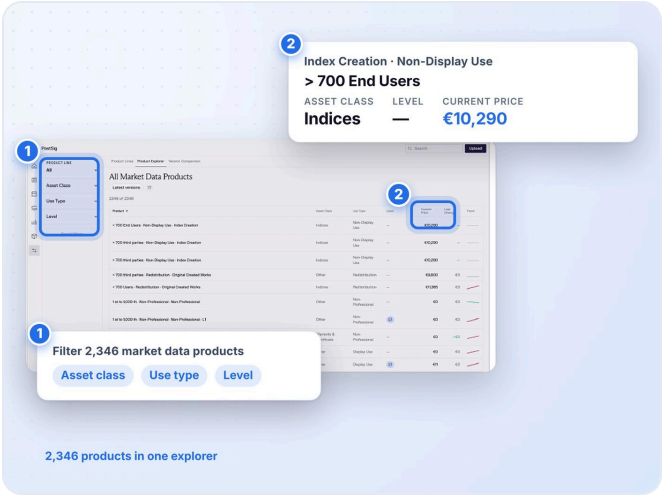
Four of the views buy-side teams work in every day.



## Catch invoice variances before you pay

Expected and invoiced amounts sit side by side, so a quantity or rate difference shows on the line where it happens, not weeks later in a reconciliation.

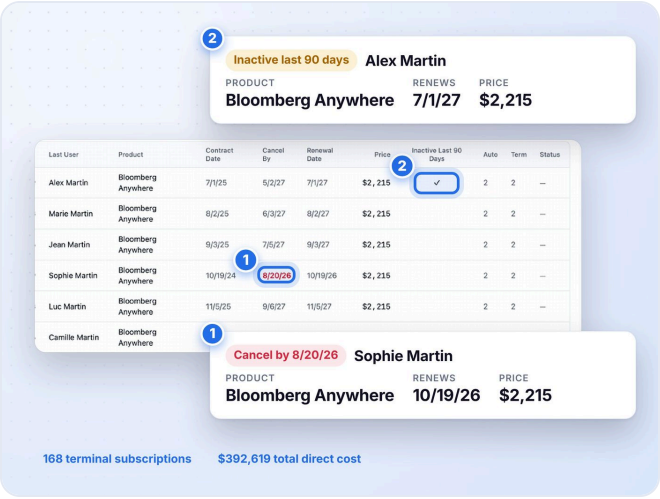
- Quantity and rate variances flagged line by line
- Items billed but missing from the invoice called out



## Every product, with the terms behind its price

Products, fee schedules and usage terms live in one explorer, so a price change or new fee traces back to the agreement it came from.

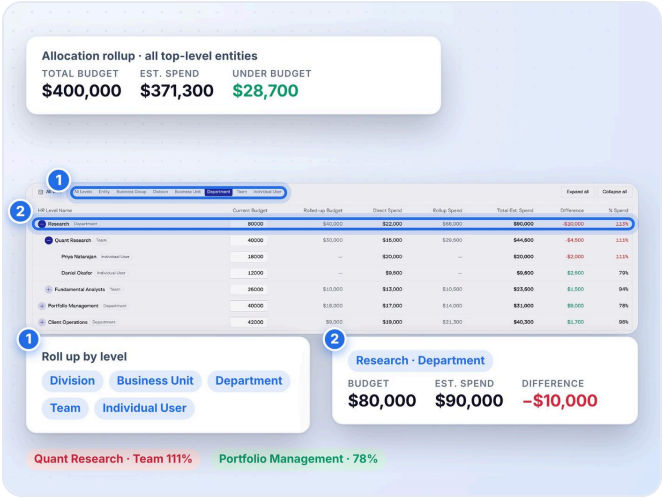
- Filter by asset class, use type and level
- Price changes traced to their source



## Know who has what, and what it costs

Subscriptions, entitlements and permissions are tied to the people who hold them and the contracts that grant them.

- Last use and renewal date on each subscription
- Inactive entitlements stand out before renewal



## Allocate spend to the people and teams behind it

Roll direct and allocated spend up from users to teams, departments and divisions, and compare it with budget at every level.

- Spend compared with budget at each level
- Expand any level to see what is behind it

RECENT MILESTONES

Extended PostSig LineageAI™ into Spend, Inventory, Product/Fee Schedule and Vendor Management workflows.

Added PostSig LineageAI™ Assistant for conversational, evidence-backed answers.

Added governed MCP access so approved systems and agents can use PostSig intelligence with permissions and source evidence preserved.

AWARDS & RECOGNITION

# Seven awards and recognitions.

This year's Buy-Side Technology Awards win builds on a run of industry recognition from WatersTechnology and others.
