

# CORAS.ai

## MANAGE YOUR MISSION LIKE AN ORCHESTRA.

## MEET GARY, YOUR AGENTIC AI AGENT.

**50X PRODUCTIVITY, BUILT FOR DECISION DOMINANCE & REAL-TIME OPTIMIZATION**

**20% THE COST OF PALANTIR, DEPLOYED IN 1/3 THE TIME**

**CORAS.ai is the only Agentic AI/LLM decision dominance platform in the Department of War.** Live and fully operational, we orchestrate data, security, workflows, and systems, like the instruments of a symphony. Alone, each is powerful — but together, they create speed, insights, and exponential outcomes in trusted DoW environments (NIPR/SIPR/UNNPI/FedRAMP High+).

**A skilled digital agent, GARY** orchestrates your data in the CORAS engine:

- Connecting to mission data — from PMOs and PEOs to contracts and documents — wherever it lives.
- Directing the right tools — from analytics to modeling — at the right time.
- Answering natural language questions with traceable, sourced outputs — no dashboards to learn, no code to write.
- Deploying the Agentic Reporting Agent to generate dashboards, reports, and documents in minutes — saved for consistent, repeatable use.
- Offering over 130 agent roles and 1,300 prompts that deliver 50x productivity.

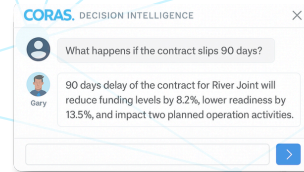

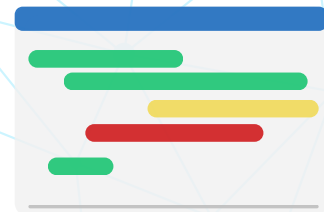

**The result:** clarity, tempo, and precision in decision-making. The workforce isn't drowning in data; they're performing as a coordinated team with GARY keeping everything in rhythm. [www.gary.ai](http://www.gary.ai)

## GARY Agentic Agent

Gary orchestrates a mission-ready digital workforce, engineered for the stakes and speed of defense and federal decision-making. Specialized AI agents function as digital teammates aligned to mission roles. Gary isn't predicting the next word — **he's running over 130 agents that deliver workflows, decision-making, and reporting.** Live and deployed today in IL-5 environments, Gary turns natural language into modeled tradeoffs, acquisition documents, and models that execute in minutes, not weeks.

- Understands Department of War mission context, from TRLs to funding lines, with no training required.
- Runs what-if scenarios on live data to simulate readiness, budgets, and tradeoffs.
- Generates acquisition documents, program briefs, and compliance-ready outputs in minutes.
- Drives workflows inside IL-5 enclaves, triggering downstream actions securely.
- Provides audit-traceable logic, every answer tied to rationale and source data.
- Agents operate consistently within CORAS guardrails.

Gary's agents guide users through each step of the workflow, providing targeted assistance at the right moment. At every stage, agents apply specialized prompts to help users generate content, validate inputs, and prepare artifacts, while **human reviewers retain full control over decisions and approvals.**
