

PRESS RELEASE

4OTC's Libre Service Connects to TP ICAP's Fusion Digital Assets for Ultra-Low Latency Spot Crypto Trading

London, September 2026 – 4OTC, a leading provider of low-latency connectivity solutions for digital assets and FX markets, has integrated with TP ICAP's Fusion Digital Assets exchange via its Libre Liquidity Bridge service, enabling liquidity providers to stream spot cryptocurrency liquidity directly to the venue with ultra-low latency. TP ICAP has partnered with 4OTC, owing to the connectivity firm's proven track record across both digital asset and FX market segments.

The connection provides market participants with a fast, resilient and streamlined route to Fusion Digital Assets, supporting efficient price distribution and execution through 4OTC's low latency technology.

Fusion Digital Assets operates a matched principal model under which participants can trade without prefunding and face TP ICAP as an investment-grade intermediary. This improves capital efficiency, reduces counterparty and operational complexity, and brings spot crypto trading closer to the standards expected in traditional wholesale markets.

"Our Libre Liquidity Bridge's connection to Fusion Digital Assets marks a significant milestone for 4OTC, and one we are very pleased to announce. Working with TP ICAP to bring liquidity providers onto the venue is exactly the kind of partnership 4OTC was built for, and we're delighted to be part of it. Digital asset trading is maturing fast, and our focus remains on ensuring institutional participants have the trusted and reliable connectivity infrastructure to keep pace."

— Alexis Atkinson, Co-Founder, 4OTC

"Institutional adoption of digital assets requires trusted infrastructure and efficient connectivity. Through 4OTC's Libre service, liquidity providers can connect to Fusion Digital Assets without the need to undertake any exchange API development work, making access faster, simpler and more scalable. The partnership reflects our continued focus on bringing the standards, connectivity and market structure of traditional wholesale markets into digital assets."

— Chay Pollard, Director Digital Assets Electronic Broking, TP ICAP

Building on the matched principal launch

The transition to Fusion Digital Assets' new matched principal model enables the venue to expand its tradable asset universe, including:

- Support for stablecoins, such as USDC.
- Expansion of cryptoasset coverage to include SOL.
- Additional fiat currency pairs.
- Future support for tokenised real-world assets (RWAs).

In response to institutional demand, operating hours will extend from 23 hours, 5 days a week to continuous weekday trading, with weekend coverage to follow.

ENDS

About 4OTC

4OTC provides institutional connectivity infrastructure for digital asset and FX markets. Its Libre platform connects liquidity providers to trading venues, delivering the fast, reliable price distribution and order routing that professional market makers demand. 4OTC provides solutions that offer unparalleled low-latency connectivity for 24/7 FX & Digital Assets trading. Additional 4OTC products include 1API, a unified API for Market Data and Orders and TicketLounge, for post-trade STP Services in FX and Digital Assets.
